

Second Cut Cotton Linters

Cotton Linters are second cut linters removed from the cottonseed, and ground in a Wiley Mill fitted with a 4 mm screen. Cotton Linters tend to agglomerate or lump together, and may be difficult to separate individually.

Cotton Linters are used in a variety of testing applications to represent organic plant matter found in indoor and outdoor environments. Cotton linters are used as a fuel system component test contaminant, an ingredient in ASHRAE Test Dust, a contaminant for high efficiency water heater testing, as well as other indoor air quality test programs.

Packaging

Number of Jars (3,5 kg per 4 liter Jar)
1 gram (min. order 20 grams)
500 gram bag
5,0 kg

- 1) Each product is shipped with related particle size distribution.
- 2) Prices are subject to change without notice.
- 3) PTI/fiatec has no return policy on all products.
